Work Experience.

School of Code

2021 -To date

Trainee Software Engineer

While I was training at the School of Code, I have learnt the principles of software development, computational thinking and agile principles in the collaborative development of solutions, and the importance of design thinking, comprehensive testing and user experience when developing software.

Projects:

Simple App link: <https://simple-app2.netlify.app>

Team of Six people, we have created app called Simple a personal organizer focusses group neurodivergent people and people who finding difficulty to organize their daily task. We have adopted Agile scrum methodology, created trello board, retrospective 4L method and mirror board. Tech stack: User research google-form, User persona-HubSpot, Wireframe.cc, Figma, dbdiagram.io, JavaScript, Auth0, React.js, Heroku PostgreSQL database, npm modules, Jest, supertest, react-testing-library, cypress, enzyme, github, vs code and deploy frontend at Netlify and backend at heroku.

Bootcampers Social link: <https://bootcampers-social.netlify.app/>

Team of four, we have created boot camper social app. For this we have used Agile Methodologies, React.js, Heroku PostgreSQL database, Chart.js, express-generator-esmodules, Postman, Automation testing- Jest & supertest, react ui library especially storybook and CSS modules to style the page, deploy at Netlify and heroku.

One of my first projects was to fetch API through query parameters. So, I have used javascript to GET requests from API through input query and display data to the page through HTML DOM querySelector and design the page through CSS.
